Farm Computer Usage and Ownership

August 2009

USDA

DSL Internet Access Method Up 9 Percentage Points

DSL was the most common method of accessing the Internet, with 36 percent of U.S. farms using it, up from 27 percent in 2007. In 2007, dialup was the most common method of accessing the internet. Dialup access dropped from 47 percent in 2007 to 23 percent in 2009. Satellite and wireless were each reported as the primary internet access methods on 13 percent of those U.S. farms with Internet access. Cable was reported as the primary access method on 11 percent of the farms.

A total of 59 percent of U.S. farms now have Internet access, compared with 57 percent in 2007. Sixty-four percent of farms have access to a computer in 2009, the same level as 2007. The proportion of U.S. farms owning or leasing a computer in 2009, at 61 percent, was up 1 percentage point from 2007. Farms using computers for their farm business increased 1 percentage point from 2007 to 36 percent in 2009.

In 2009, 81 percent of U.S. farms with sales and government payments of \$250,000 or more have access to a computer, 79 percent own or lease a computer, 69 percent are using a computer for their farm business, and 76 percent have Internet access. For farms with sales and government payments between \$100,000 and \$249,999, the figures are: 70 percent have access to a computer, 67 percent own or lease a computer, 52 percent are using a computer for their farm business, and 63 percent have Internet access. Of the farms with sales and government payments between \$10,000 and \$99,999, 62 percent reported having computer access, 59 percent own or lease a computer, 38 percent use a computer for their farm business, and 57 percent have Internet access.

For crop farms, 65 percent have computer access and 40 percent use a computer for their farm business in 2009, up 1 and 3 percentage points from 2007, respectively. Internet access for crop farms has increased to 60 percent in 2009, compared with 56 percent in 2007. In 2009, a total of 63 percent livestock farms have computer access and 58 percent have Internet access.

Farm Numbers: To help equate the percentages published in this report to actual farm counts, a table showing "Number of Farms: by State and United States" from the February 2009 NASS publication "Farms, Land in Farms, and Livestock Operations" is included below. A farm is "any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the year."

Survey Procedures: The June Agricultural Survey is conducted every year to provide estimates of farm numbers and land in farms, crop acres planted, grains and oilseeds in storage, livestock inventories, and land values. Every other year since 1997, questions were included in the survey form that asked the operator about access and use of computers.

The 2009 computer usage estimates are based on responses from 31,495 agricultural operations and represent all sizes and types of farms. Coefficients of variations (CVs) at the national level in 2009 were 6 percent or less; at the regional level, CVs ranged from 1 to 24 percent; and at the State level, CVs generally ranged from 2 to 54 percent.

The 2009 June Agricultural Survey provided the first opportunity for all American Indian operators to report computer usage individually. Previous Farm Computer Usage and Ownership releases allowed for a single report for an entire reservation.

Revisions: Estimates for Farms With Computer Access, Farms That Own or Lease Computers, Farms Using Computers for Farm Business, and Farms With Internet Access were reviewed and revised as necessary based on the 2007 Agricultural Census.
